

AEGIS

[TEAM : TECHTONIC]

AI-Enabled Emergency & Intelligent Logistics System

DETECT DECIDE RECOVER

When One Disruption Hits, The Entire Supply Chain Feels It

Weather Events

Disrupt routes and delay shipments across the network

Port Strikes & Congestion

Cascade failures ripple across every downstream node

Geopolitical Disruptions

Force emergency rerouting with no playbook in hand

Cold-Chain Failures

Put temperature-sensitive cargo at irreversible risk

FLEET UNDERUTILIZATION

Leaves available vehicles/assets unused while other shipments need capacity

The question: What is affected, how serious is it, and what action should I take — immediately?

Our Solution - Introducing AEGIS

LOGISTICS OPERATIONS MANAGERS

Monitor the overall supply chain and make operational decisions.

SUPPLY CHAIN MANAGERS

Monitor shipment risks and disruptions.

FLEET MANAGERS

Manage vehicle utilization and redeployment.

LOGISTICS OPERATORS

Handle individual shipment and routing decisions.

Our Solution — Introducing AEGIS

AEGIS is an AI-driven logistics decision platform that transforms complex supply-chain data into actionable recommendations.

How AEGIS Is Built

Architecture

Supply Chain Command Center

DEMO SCENARIO: Shipment C204

Risk Score: 92/100

Live logistics map showing ports, trucks, routes, and disruption zones in real time.

Why Critical:

- ♦ Active route disruption
- ♦ Temperature excursion detected
- ♦ Approaching delivery deadline
- ♦ High-priority shipment

Recommended Action:

Review rerouting and cold-chain recovery options.

Shipment C204 is a live demo scenario illustrating LogiShield's risk prioritization in action.
